Lab 15: Task 1

f1 takes x and squares it
f2 takes x and divides the absolute difference of x and x/2 by 100 and rounds the result to the integer closest to 0.
f3 takes x and y and returns true is x does not equal y otherwise it will return false.
F4 takes four functions and two values, the third function is fed the results from function 1 and 2 as parameters where function 1 is given values 1 and function 2 is given function 2 as a parameter.

From the call at the bottom f4 is fed f1, f2, and f3, with 5 as value 1 and 130 as value 2.
